

## AMENDMENTS TO THE CLAIMS

This listing of the claims replaces all prior versions and listings of claims in the application.

### Listing of the Claims:

1-25. (canceled)

26. (currently amended) A packing machine comprising  
a frame (33) having a front wall;

a series of ~~first operating~~ packing devices (2, 4, 8, ~~149~~), which fold at least one sheet (6; 9) of packing material about a product (4), are supported by the frame (33), and are located on the front wall of the frame (33);

a crane supported by the frame (33) and for facilitating removal/assembly of the ~~operating~~ packing devices (2, 4, 8); wherein the crane comprises a horizontal guide (148), and an arm running along the guide (148); and

~~first~~ operating devices (149) fitted to the frame (33) to move between a work position, in which the ~~first~~ operating devices (149) are located on the front wall of the frame (33) and in front of the crane, and a maintenance position in which the ~~first~~ operating devices (149) permit free access to the crane from the front wall.

27. (canceled)

28. (previously amended) The machine of Claim 26, wherein said arm is movable between a rest position, in which the arm is substantially parallel to said guide (148), and a work position in which the arm is crosswise to the guide (148).

29. (currently amended) The machine of Claim 26, wherein said frame (33) comprises at least one beam (145) rigidly supporting said ~~first~~ operating devices (149) and movable

with respect to the frame (33) to move the ~~first~~ operating devices (149) between said work position and said maintenance position.

30. (currently amended) The machine of Claim 29, and comprising a protective casing (101) supported by the frame (33) and for housing the ~~operating~~ packing devices (2, 4, 8, 149); the protective casing (101) comprising a panel (111) supported by said beam (145).

31. (previously presented) The machine of Claim 30, wherein said panel (111) is movable between an open position and a closed position by means of a first actuating device supported by said beam (145).

32. (previously presented) The machine of Claim 29, wherein said beam (145) is hinged to said frame (33) to oscillate, with respect to the frame (33), about a horizontal axis (146) by means of a second actuating device.

33. (currently amended) The machine of Claim 26, and comprising ~~a series of operating devices (2, 4, 8, 149) supported by the frame (33) and located on the front wall of the frame (33);~~ a user interface unit (122) having a box (123), and a monitor (125) housed in the box (123); and a tubular body (124) supporting said box (123) at one end and hinged, at the other end, to the base of said frame (33) to rotate about a vertical axis (129).

34. (previously presented) The machine of Claim 33, and comprising connecting cables for connecting said box (123) to said frame (33); the connecting cables being housed in said tubular body (124).

35. (previously presented) The machine of Claim 33, wherein said tubular body comprises a substantially vertical portion (127) supporting said box (123); and a horizontal portion hinged to the base of said frame (33).

36. (previously presented) The machine of Claim 26, and comprising a display (132), which is supported by said frame (33), at said front wall, and is relatively large so as to display writing readable from a distance of at least 20 meters.

37. (previously presented) The machine of Claim 36, wherein said display (132) comprises a matrix of red LED's.

38. (currently amended) The machine of Claim 36, and comprising a protective casing (101) supported by the frame (33) and housing the ~~operating~~ packing devices (2, 4, 8) and the operating devices (149); the protective casing (101) comprising a substantially transparent panel (111) covering said display (132).

39. (previously presented) The machine of Claim 26, and comprising a straight conveyor (150) for feeding packets (151) of cigarettes in a feed direction (162); and a control station (152) located along said conveyor (150) and comprising a television camera (157) and two mirrors (159); said television camera (157) being mounted with its optical axis (160) perpendicular to a front wall (161) of a packet (151) of cigarettes at the control station (152); and said two mirrors (159) being located on opposite sides of said conveyor (150) to reflect to the television camera (157) a complete view of the lateral walls (164) of the packet (151) of cigarettes, a complete view of the edges (165) between the lateral walls (164) and a rear wall (166), and a view of two end portions of the rear wall (166) not resting on the conveyor (150).

40-42 (canceled)

43. (previously presented) A packing machine comprising

a frame (33) having a front wall;

a series of first operating devices (2, 4, 8, 149) supported by the frame (33) and located on the front wall of the frame (33);

a crane supported by the frame (33) and for facilitating removal/assembly of the operating devices (2, 4, 8); and

first operating devices (149) fitted to the frame (33) to move between a work position, in which the first operating devices (149) are located on the front wall of the frame (33) and in front of the crane, and a maintenance position in which the first operating devices permit free access to the crane from the front wall; wherein said frame (33) comprises at least one beam (145) rigidly supporting said first operating devices (149) and movable with respect to the frame (33) to move the first operating devices (149) between said work position and said maintenance position.

44. (previously presented) The machine of Claim 43, wherein said crane comprises a horizontal guide (148), and an arm running along the guide (148).

45. (previously presented) The machine of Claim 44, wherein said arm is movable between a rest position, in which the arm is substantially parallel to said guide (148), and a work position in which the arm is crosswise to the guide (148).

46. (previously presented) The machine of Claim 43, and comprising a protective casing (101) supported by the frame (33) and for housing the operating devices (2, 4, 8, 149); the protective casing (101) comprising a panel (111) supported by said beam (145).

47. (previously presented) The machine of Claim 46, wherein said panel (111) is movable between an open position and a closed position by means of a first actuating device supported by said beam (145).

48. (previously presented) The machine of Claim 43, wherein said beam (145) is hinged to said frame (33) to oscillate, with respect to the frame (33), about a horizontal axis (146) by means of a second actuating device.
